Statement of Qualifications and Limitations

The attached Report (the “Report”) has been prepared by AECOM Canada Ltd. (“AECOM”) for the benefit of the Client (“Client”) in accordance with the agreement between AECOM and Client, including the scope of work detailed therein (the “Agreement”).

The information, data, recommendations and conclusions contained in the Report (collectively, the “Information”):

- § is subject to the scope, schedule, and other constraints and limitations in the Agreement and the qualifications contained in the Report (the “Limitations”);
- § represents AECOM’s professional judgement in light of the Limitations and industry standards for the preparation of similar reports;
- § may be based on information provided to AECOM which has not been independently verified;
- § has not been updated since the date of issuance of the Report and its accuracy is limited to the time period and circumstances in which it was collected, processed, made or issued;
- § must be read as a whole and sections thereof should not be read out of such context;
- § was prepared for the specific purposes described in the Report and the Agreement; and
- § in the case of subsurface, environmental or geotechnical conditions, may be based on limited testing and on the assumption that such conditions are uniform and not variable either geographically or over time.

AECOM shall be entitled to rely upon the accuracy and completeness of information that was provided to it and has no obligation to update such information. AECOM accepts no responsibility for any events or circumstances that may have occurred since the date on which the Report was prepared and, in the case of subsurface, environmental or geotechnical conditions, is not responsible for any variability in such conditions, geographically or over time.

AECOM agrees that the Report represents its professional judgement as described above and that the Information has been prepared for the specific purpose and use described in the Report and the Agreement, but AECOM makes no other representations, or any guarantees or warranties whatsoever, whether express or implied, with respect to the Report, the Information or any part thereof.

Without in any way limiting the generality of the foregoing, any estimates or opinions regarding probable construction costs or construction schedule provided by AECOM represent AECOM’s professional judgement in light of its experience and the knowledge and information available to it at the time of preparation. Since AECOM has no control over market or economic conditions, prices for construction labour, equipment or materials or bidding procedures, AECOM, its directors, officers and employees are not able to, nor do they, make any representations, warranties or guarantees whatsoever, whether express or implied, with respect to such estimates or opinions, or their variance from actual construction costs or schedules, and accept no responsibility for any loss or damage arising therefrom or in any way related thereto. Persons relying on such estimates or opinions do so at their own risk.

Except (1) as agreed to in writing by AECOM and Client; (2) as required by-law; or (3) to the extent used by governmental reviewing agencies for the purpose of obtaining permits or approvals, the Report and the Information may be used and relied upon only by Client.

AECOM accepts no responsibility, and denies any liability whatsoever, to parties other than Client who may obtain access to the Report or the Information for any injury, loss or damage suffered by such parties arising from their use of, reliance upon, or decisions or actions based on the Report or any of the Information (“improper use of the Report”), except to the extent those parties have obtained the prior written consent of AECOM to use and rely upon the Report and the Information. Any injury, loss or damages arising from improper use of the Report shall be borne by the party making such use.

This Statement of Qualifications and Limitations is attached to and forms part of the Report and any use of the Report is subject to the terms hereof.

1. Introduction

AECOM Canada Ltd. (AECOM) was retained by Metrolinx to complete a Tree Inventory for the proposed Hamilton Light Rail Transit (LRT) alignments and for the associated Operation Maintenance Storage Facility (OMSF) site in the City of Hamilton. This Tree Inventory Report has been prepared in accordance with the requirements of the *City of Hamilton By-law No.15-125 To Regulate Trees on or Affecting Public Property* and the *City of Hamilton Tree Protection Guidelines – City Wide* using accepted standard arboriculture techniques as outlined in the *Council of Tree and Landscape Appraisers Guide for Plant Appraisal, 9th Edition* (2000).

The *City of Hamilton By-law No.15-125 To Regulate Trees on or Affecting Public Property* requires applications for tree removal for all public trees (no minimum diameter breast height (DBH)) within the ROW. In addition to the regulations listed in this By-law, the *City of Hamilton Forestry Management Plan's 'Public Tree Removal Policy'* requires that if a project requires the removal of greater than or equal to 25 trees, a landscape and tree management plan must be prepared and submitted to the Forestry and Horticulture Section and City Council approval must be granted. The purpose of this Tree Inventory Report is to inventory all of the trees within the ROW and to assist with future permitting requirements for tree removals on Public Property.

1.1 Study Area

The Hamilton LRT Project B-Line alignment extends along Main Street from Leland Street to the Main Street/Highway 403 Bridge. A proposed fly-over at the Main Street Bridge will allow the alignment to then extend along King Street until King Street intersects with Main Street, where the alignment will continue along Main Street until the Main Street and Queenstown Road traffic circle. The A-Line alignment extends north from the James Street South and Main Street East intersection to the intersection of James Street North and Guise Street West. The B-Line and A-Line alignments are shown on **Figure C-1**.

The Hamilton LRT Project also includes the associated OMSF. The OMSF site consists of two adjacent properties located at 606 Aberdeen Avenue and 153 Chatham Street. The first property is a 5.89 ha operational industrial plant that contains a 2.3 ha woodlot on the north side of the property. The second property consists of a 7.12 ha former railyard. The proposed OMSF boundary is shown on **Figure C-2**. A tree tally was conducted at the OMSF site in anticipation of potential tree removals.

The following outlines the methods and results of the tree inventory and assessment completed for the proposed Hamilton LRT Project.

2. Methods

The tree inventory and assessment was completed by an AECOM Certified Arborist from mid-September, 2016 to mid-November, 2016 within the study area using accepted standard arboriculture techniques as outlined in the *Council of Tree & Landscape Appraisers Guide for Plant Appraisal, 9th Edition* (2000). The tree inventory and assessment was also done in accordance with *City of Hamilton By-law No.15-125* and the *City of Hamilton Tree protection Guidelines – City Wide*.

2.1 A-Line and B-Line Tree Inventory

Within the A-Line alignment and B-Line alignment study area, all trees within 15 m of the existing edge of pavement of the roadways, which included the road right-of-way (ROW) as well as adjacent private and public properties were inventoried and assessed.

Trees within the A-Line alignment and B-Line alignment study area were located using a Trimble GPS unit. For trees located on private property, a UTM location was recorded at the closest point along the ROW boundary and the distance to the trunk was estimated. The locations of these trees are therefore an estimate. The species and diameter-at-breast-height (DBH) was also recorded for each tree.

2.2 OMSF Tree Inventory

The proposed OMSF is located on private property and, as such, is not subject to the *City of Hamilton By-law No. 15-125*. The intent of the *City of Hamilton Tree Protection Guidelines – City Wide* is to protect and preserve trees and woodlands on private lands. As such, the tree inventory within the proposed OMSF properties was conducted following the General Vegetation Inventory (GVI) process provided in these Guidelines. As stated in the Guidelines, the GVI is not intended to be a detailed inventory, but to provide a general overview of vegetation on site. As per the Guidelines, the GVI is meant to document the general characteristics including:

- Vegetation type (e.g. coniferous, deciduous, hedgerow, deciduous woodland, marsh, etc.).
- Number of trees (general descriptions of relative species abundance, dominant tree species, and density).
- Trees or groups of trees that are significant to the local community and should be preserved for this reason (e.g. local landmarks, visual screens, heritage trees, rare or unusual species).
- General tree condition (health and structural condition).
- For woodland, generally indicate the range of tree size using dbh to provide an indication of tree maturity and woodland age. It is not necessary to measure every tree in a woodland.

In order to document these characteristics, a tree tally was conducted at the OMSF site. Trees of all diameters were included in the tally and were grouped by species and range of DBH.

2.3 Tree Assessment

Tree assessments were conducted by a Certified Arborist using visual examination techniques of above-ground parts for each tree. The trees observed were not climbed, probed, cored, or dissected, and excavation for detailed root crown inspection was not performed. Trees are living organisms, and their health and vigour are continually changing over time due to factors such as seasonal variations and changes in site conditions. For this reason, the assessment presented in this report is valid at the time of inspection, and no guarantee is made about the continued health of trees that are deemed to be in good condition.

Each tree was given a subjective condition rating of Excellent, Good, Fair, Poor, Very Poor or Dead. The following is a summary of how the ratings were determined:

Excellent (E)	no apparent problems with health and/or structural form
Good (G)	minor problems with health and/or structural form
Fair (F)	more serious problems with health and/or structural form
Poor (P)	major problems with health and structural form
Very Poor (VP)	major problems with health and structural form with minimal live growth
Dead (D)	no live growth

The visual inspection included recording abiotic and biotic disorders as well as structural defects. These defects and disorders are listed within the comments column of **Appendix A**. Structural defects included bark, cracks, co-dominant stems, etc. are often harmless in young trees, but can become more serious in larger, older trees with heavier branches. These trees can pose a greater threat of injury and damage to adjacent property or residents should they fail. The following provides a description of some of the disorders and defects that were observed during the tree inventory and assessment:

Root compaction – compression of the soil, often a result of vehicle or heavy equipment traffic that breaks down soil aggregates and reduces soil volume and total pore space, especially macropore space (Lilly 2001). Soil and root compaction often reduces the trees ability to uptake water and essential nutrients to maintain life. Therefore, depending on species tolerance, root compaction can lead to the decline of tree health and the increase in potential for failure.

Included bark – bark that has become embedded in a union between branch and trunk or between co-dominant stems, causing a weak structure (Lilly 2001). Some species are more prone to included bark than others. However, as trees grow, these unions are more likely to fail under stress (i.e. heavy winds or a storm event).

Cankers and wounds – cankers are localized dead stem tissue which may appear shrunken and discoloured. Wounds are often the result of mechanical damage. These defects usually result in decay and reduce wood strength. The severity of the defect depends on the extent and location of the decay and the presence of other defects (i.e. wounds can be more problematic should the trees have an added lean). The severity of wounds or cankers is dependent on the amount of sound wood present. A tree needs 1 inch or more of sound wood for each 6 inches of stem diameter. These defects can weaken wood and attachments posing a higher threat to adjacent property or residents.

Adventitious/Epicormic Shoots – Adventitious/epicormic shoots emerge from dormant buds along the trunk or branches of the tree, often in response to a hormonal trigger (Lilly 2001). This growth can be indicative of stress as it is often the result of tree stress such as canopy loss due to biotic or abiotic factors.

Witches Broom – abnormal development of multiple secondary shoots, forming a broom like effect (Lily, 2001).

3. Results

The following sections provide a summary of the trees inventoried and assessed for the Hamilton LRT. **Appendix A** includes a list of all trees recorded within the A-Line alignment and B-Line alignment study areas. **Appendix B** includes a summary of trees tallied within the OMSF study area. The location of trees inventoried within the A-Line alignment and B-Line alignment study areas is illustrated on **Figures C-5 to C-74** in **Appendix C**.

3.1 Tree Inventory

3.1.1 A-Line and B-Line Tree Inventory

A total of 2938 trees were inventoried within the A-Line alignment and B-Line alignment study areas. Of these trees, 1209 were recorded within the road ROW and 1729 were captured on adjacent properties within 15 metres of the edge of pavement.

3.1.2 OMSF Tree Inventory

A total of 2945 trees were tallied within the OMSF site.

3.1.3 Provincial Species at Risk and Regionally Rare Species

No naturally occurring provincially rare species or naturally occurring regionally rare species were located within the A-Line alignment and B-Line alignment study area. Fifteen (15) Kentucky Coffee-trees (*Gymnocladus dioicus*), five (5) Tulip Trees (*Liriodendron tulipifera*), and 46 Sycamore trees (*Platanus occidentalis*) have been planted as boulevard trees within the study area. As these trees are not naturally occurring, they are not protected under any provincial or municipal legislation. The Kentucky Coffee-tree is listed as 'Threatened' on the *Endangered Species Act* (ESA 2007) in Ontario. The Tulip Tree and Sycamore tree are regionally rare in the City of Hamilton. Planted provincial Species at Risk and regionally rare trees were inventoried and assessed and are shown in **Table 3-1**.

Table 3-1: Planted Provincial Species at Risk and Regionally Rare Species

Tree No	Common Name	DBH (cm)	Condition	Significance
176	Kentucky Coffee -tree (<i>Gymnocladus dioicus</i>)	4.5	Fair	Threatened
185	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	4	Fair	Threatened
186	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	4	Very Poor	Threatened
196	Sycamore (<i>Platanus occidentalis</i>)	8.5	Good	Regionally rare
198	Sycamore (<i>Platanus occidentalis</i>)	10	Good	Regionally rare
199	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	7	Fair	Threatened

Tree No	Common Name	DBH (cm)	Condition	Significance
203	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	7	Good	Threatened
207	Sycamore (<i>Platanus occidentalis</i>)	4.5	Dead	Regionally rare
208	Sycamore (<i>Platanus occidentalis</i>)	21	Fair	Regionally rare
209	Sycamore (<i>Platanus occidentalis</i>)	5.5	Poor	Regionally rare
212	Sycamore (<i>Platanus occidentalis</i>)	6.5	Good	Regionally rare
216	Sycamore (<i>Platanus occidentalis</i>)	4.5	Fair	Regionally rare
218	Sycamore (<i>Platanus occidentalis</i>)	26.5	Good	Regionally rare
219	Sycamore (<i>Platanus occidentalis</i>)	26	Good	Regionally rare
220	Sycamore (<i>Platanus occidentalis</i>)	25	Fair	Regionally rare
221	Sycamore (<i>Platanus occidentalis</i>)	25	Good	Regionally rare
240	Sycamore (<i>Platanus occidentalis</i>)	20.5	Fair	Regionally rare
241	Sycamore (<i>Platanus occidentalis</i>)	22	Poor	Regionally rare
242	Sycamore (<i>Platanus occidentalis</i>)	27	Good	Regionally rare
243	Sycamore (<i>Platanus occidentalis</i>)	28.5	Fair	Regionally rare
244	Sycamore (<i>Platanus occidentalis</i>)	24	Fair	Regionally rare
246	Sycamore (<i>Platanus occidentalis</i>)	7.5	Good	Regionally rare
248	Sycamore (<i>Platanus occidentalis</i>)	4.5	Good	Regionally rare
249	Sycamore (<i>Platanus occidentalis</i>)	5.5	Fair	Regionally rare
252	Sycamore (<i>Platanus occidentalis</i>)	5.5	Good	Regionally rare
363	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	6	Good	Threatened
364	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	6	Excellent	Threatened
365	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	6.5	Fair	Threatened
532	Tulip Tree (<i>Liriodendron tulipifera</i>)	3	Good	Regionally rare
998	Sycamore (<i>Platanus occidentalis</i>)	9.5	Fair	Regionally rare
1017	Tulip Tree (<i>Liriodendron tulipifera</i>)	8.5	Good	Regionally rare
1044	Tulip Tree (<i>Liriodendron tulipifera</i>)	60	Good	Regionally rare
1067	Kentucky coffeetree (<i>Gymnocladus dioicus</i>)	14	Excellent	Threatened
1068	Tulip Tree (<i>Liriodendron tulipifera</i>)	83	Good	Regionally rare
1126	Sycamore (<i>Platanus occidentalis</i>)	41	Good	Regionally rare
1146	Sycamore (<i>Platanus occidentalis</i>)	31	Good	Regionally rare
1147	Sycamore (<i>Platanus occidentalis</i>)	28	Good	Regionally rare
1148	Sycamore (<i>Platanus occidentalis</i>)	37	Fair	Regionally rare
1153	Sycamore (<i>Platanus occidentalis</i>)	10	Good	Regionally rare
1154	Sycamore (<i>Platanus occidentalis</i>)	12	Good	Regionally rare
1155	Sycamore (<i>Platanus occidentalis</i>)	12	Good	Regionally rare
1156	Sycamore (<i>Platanus occidentalis</i>)	11	Good	Regionally rare
1157	Sycamore (<i>Platanus occidentalis</i>)	12	Good	Regionally rare
1158	Sycamore (<i>Platanus occidentalis</i>)	12	Good	Regionally rare

Tree No	Common Name	DBH (cm)	Condition	Significance
1311	Sycamore (<i>Platanus occidentalis</i>)	47	Good	Regionally rare
1312	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	4	Good	Threatened
1313	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	5	Excellent	Threatened
1439	Sycamore (<i>Platanus occidentalis</i>)	19	Fair	Regionally rare
1507	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	5	Good	Threatened
1744	Sycamore (<i>Platanus occidentalis</i>)	38	Good	Regionally rare
1954	Sycamore (<i>Platanus occidentalis</i>)	40.5	Good	Regionally rare
2443	Sycamore (<i>Platanus occidentalis</i>)	7	Good	Regionally rare
2444	Sycamore (<i>Platanus occidentalis</i>)	7	Good	Regionally rare
2445	Sycamore (<i>Platanus occidentalis</i>)	7	Good	Regionally rare
2446	Sycamore (<i>Platanus occidentalis</i>)	7	Good	Regionally rare
2449	Sycamore (<i>Platanus occidentalis</i>)	7	Good	Regionally rare
2450	Sycamore (<i>Platanus occidentalis</i>)	7	Good	Regionally rare
2453	Sycamore (<i>Platanus occidentalis</i>)	6	Good	Regionally rare
2457	Sycamore (<i>Platanus occidentalis</i>)	6	Good	Regionally rare
2458	Sycamore (<i>Platanus occidentalis</i>)	7	Good	Regionally rare
2460	Sycamore (<i>Platanus occidentalis</i>)	6	Good	Regionally rare
2462	Sycamore (<i>Platanus occidentalis</i>)	6	Good	Regionally rare
2508	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	4	Good	Threatened
2515	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	3	Good	Threatened
2528	Tulip Tree (<i>Liriodendron tulipifera</i>)	5	Fair	Regionally rare
2535	Kentucky Coffee-tree (<i>Gymnocladus dioicus</i>)	7.5	Good	Threatened

A total of 20 Butternut trees (*Juglans cinerea*) were found within the proposed OMSF property. The location of each Butternut is illustrated on **Figure C-75** along with the general habitat boundaries for each tree. The description of each Butternut general habitat boundary category is as follows:

- Category 1 habitat:** A Butternut individual and suitable areas within a 25 m radius around the individual will be considered to have the lowest tolerance to alteration. This area provides tree specific protection (this is a no-touch zone).
- Category 2 habitat:** Suitable areas between 25 m – 50 m from a tree will be considered to have a moderate tolerance to alteration. This area is considered necessary habitat for seed dispersal and species recruitment (portions of these area may be affected depending on amount and type of activity).

This species is designated as 'Endangered' under the *ESA 2007*. Requirements for removal are dependent on tree health and whether the tree is a hybrid (hybrids are not protected). As such, a health assessment is required to be completed by a Qualified Butternut Health Assessor. The Butternut health assessment must be completed before any activity can commence. The assessment will determine any

permitting requirements should the removal of Butternut trees be required. The Butternut trees were inventoried and assessed and can be found below in **Table 3-2**.

Table 3-2: Provincially Endangered Butternut Trees*

Tree No.	Species	DBH cm**	Significance
TR8	Butternut (<i>Juglans cinerea</i>)	TBD	Endangered
TR43	Butternut (<i>Juglans cinerea</i>)	13	Endangered
TR90	Butternut (<i>Juglans cinerea</i>)	TBD	Endangered
TR91	Butternut (<i>Juglans cinerea</i>)	10.5	Endangered
TR92	Butternut (<i>Juglans cinerea</i>)	21.5	Endangered
TR93	Butternut (<i>Juglans cinerea</i>)	5	Endangered
TR94	Butternut (<i>Juglans cinerea</i>)	15	Endangered
TR95	Butternut (<i>Juglans cinerea</i>)	22	Endangered
TR96	Butternut (<i>Juglans cinerea</i>)	45	Endangered
TR97	Butternut (<i>Juglans cinerea</i>)	28	Endangered
TR98	Butternut (<i>Juglans cinerea</i>)	27	Endangered
TR99	Butternut (<i>Juglans cinerea</i>)	38	Endangered
TR100	Butternut (<i>Juglans cinerea</i>)	38	Endangered
TR101	Butternut (<i>Juglans cinerea</i>)	19	Endangered
TR102	Butternut (<i>Juglans cinerea</i>)	18	Endangered
TR103	Butternut (<i>Juglans cinerea</i>)	13.5	Endangered
TR104	Butternut (<i>Juglans cinerea</i>)	32	Endangered
TR105	Butternut (<i>Juglans cinerea</i>)	14.5	Endangered
TR150	Butternut (<i>Juglans cinerea</i>)	25	Endangered
TR151	Butternut (<i>Juglans cinerea</i>)	21	Endangered

*The condition rating (Excellent, Good, Fair, Very Poor, Poor, or Dead) could not be accurately assessed for all Butternut trees due to lack of foliage and timing of the field investigations. A separate health assessment will be conducted to confirm the health condition of Butternut trees.

**DBH was not recorded for all Butternut trees because DBH measurement was not included as part of the tree tally. DBH will be recorded during the Butternut health assessment.

3.2 Tree Assessment

Many of the trees inventoried and assessed showed signs of defects as a result of the urban landscape in which they are found. Additionally, branch failure was a common observation and likely could have been the result of severe winter storms that have occurred in recent years.

In addition to structural defects, some biotic disorders can cause a decline in tree health and even result in tree mortality. One commonly encountered biotic stressor observed during the tree inventory and assessment included the presence of Emerald Ash Borer (EAB) (*Agilus planipennis*). The EAB is a highly destructive invasive insect that attacks and kills all species of Ash trees native to North America. As such, the Canadian Food Inspection Agency (CFIA) has declared it an invasive alien species that must be quarantined (Government of Canada 2015).

Most tree damage to ash species caused by EAB is the result of larvae, which destroy the layer under the bark (i.e. cambium). This layer is responsible for transport of water and nutrients throughout the tree. Symptoms including chlorosis (i.e. loss of green colouring) of foliage, thinning and dieback of canopy, epicormics shoots and D-shaped exit holes which are the result of larval emergence. A total of 48 ash trees were inventoried and showed evidence of EAB including greater than 10 to 100% loss of canopy cover, woodpecker activity as well as D-shaped exit holes.

4. Conclusions

A total of 2938 trees were inventoried and assessed along the A-Line alignment and B-Line alignment for the Hamilton LRT project. Trees inventoried included all trees within the ROW and all trees within 15 m of the existing edge of pavement (i.e. private property, parkland and natural features). In addition, a total of 2945 trees were tallied at the proposed OMSF site.

A comprehensive inventory could not be completed as access to private property was not granted at the time of the inventory. As such, the inventory of adjacent property trees should be considered an estimate at best. A survey will need to be conducted in order to ensure the location of all inventoried trees along the alignment and to determine the presence of 'boundary trees' as defined by the *Ontario Forestry Act* (2009). The Ontario Forestry Act defines a boundary tree as any tree growing on the boundary between adjoining lands. The survey should be conducted during the detailed design stage. In advance of construction, it is recommended that an Arborist be retained during any potential tree removals to ensure proper arboriculture techniques are employed prior to and during future construction as well as confirm the need to remove or preserve trees located on private property. The *City of Hamilton Tree Protection Guidelines – City Wide* document should be consulted before any work is undertaken within the project study areas to ensure proper tree protection measures are implemented.

5. Certification

I certify that all the statements of fact in this assessment are true, complete, and correct to the best of my knowledge and belief, and that they are made in good faith.
