

# WATER, WASTEWATER & STORMWATER MASTER PLAN PROJECT UPDATE

## Project Scope

The Water, Wastewater and Stormwater (W/WW/SWM) Master Plan is a comprehensive plan for the growth-related infrastructure requirements for the City of Hamilton. The Master Plan consists of a review of growth projections, servicing policies, design criteria and completion of public consultation and servicing strategy development and evaluation under the Municipal Engineers Association (MEA) Class Environmental Assessment (EA) Master Plan Process. The population and employment projection inputs are developed by the City Planning department under the Growth Related Integrated Development Strategy (GRIDS) 2 process and will consist of population, employment and densities within existing areas (infill / intensification) and new Greenfield growth to 2051. Visit [GRIDS 2 and Municipal Comprehensive Review](#) (MCR) for more information. At the conclusion of the Master Plan, a key deliverable will be a detailed W/WW/SWM Capital Program, complete with project descriptions and capital costs. This program will form the basis for the next Development Charges (DC) update in 2023.

## Planning Process (GRIDS 2) Planning Scenarios

Through the City’s Municipal Comprehensive Review Process, the **Ambitious Density** Planning Scenario was developed and presented to Council. After extensive consultation and feedback from City Council, Stakeholders and Residents, an additional Planning Scenario named, “**No Urban Boundary Expansion**” was developed. At the General Issues Committee, City Council voted to proceed with its planning to accommodate future growth in a manner that does not include an expansion to the City’s urban boundary. This scenario is still subject to feedback from the Province, as such, the Master Plan Team is currently reviewing the water, wastewater and stormwater servicing needs to 2051 under *both* Planning Scenarios.
